

# CSC 360

# Operating Systems

# Introduction

Wenjun Yang

<https://wenjun-y.github.io/csc360>

**Fall 2025**

# Instructor

- Dr. Wenjun Yang <wenjunyang@uvic.ca>
  - teacher-scholar & postdoc with CS
  - use UVic Teams first, as email not always reliable
    - to help, always include **[csc360]** in your email subject line
  - office hours: **MR 10:15--11:15am**
    - or by appointment
    - **on UVic Teams**
  - research area
    - Networked system for distributed AI
    - <https://wenjun-y.github.io/>

# CSC360's Mighty TAs

Jinwei Zhao

Quanwei Zhang

Johnathan Warawa

# Lab/tutorial instructors

- Jinwei Zhao, Quanwei Zhang, and Johnathan
  - their email on Brightspace
- Tutorials: start next week!
  - Please attend your registered section only!
    - tutorial lectures
      - **C**, libc, sockets, pthreads, ...
    - assignment help
      - spec go-through, common problems, ...
    - practice problems

T01: MAC D115 T 8:30am  
T02: COR B129 W 1:30pm  
T03: DSB C118 W 11:30am

# About the course

- *Introduction to Operating Systems*
  - (A01/2) **MR 8:30--9:50am, DSB C118**
  - (A03/4) **11:30am--12:50pm, CLE A224**
  - Bright: “Fall 2025 CSC 360 A01 - A04 **X**”
    - assignments, gradebook, etc
    - **discussion channel hosted on UVic Teams**
  - prerequisites
    - Data structures (CSc **225** or 226)
    - Computer architecture (CSc **230** or CENG 255)
    - System programming (CSc/SENG **265**, CENG)

# Message from Undergrad Advisor

- Email: [cscadvisor@uvic.ca](mailto:cscadvisor@uvic.ca)
- Do not have the prerequisite course(s)?
  - need to obtain a waiver
  - otherwise, prerequisite drop after the first week
- Taking the course more than twice?
  - need to have a letter from the Chair and the Dean
  - otherwise, being dropped from the class
- Make sure you can receive email from Bright!
  - use UVic Teams first

# Course materials

- Required textbook
  - Operating system concepts, 7th or **newer** editions
    - 6th and other editions: different chapter schedules
  - online resources
    - <http://codex.cs.yale.edu/avi/os-book/>  
or <http://os-book.com/>
    - errata, slides, practice exercises and solutions
- Explore further
  - Google!

# Goals for Today

- Why should you care?
- Why is it hard?
- What is an Operating System?
- Policy/advice/challenges/opportunities

# Goal 1: Why should you care?

# Goal 1: Why should we care?

- The OS is everywhere
  - Every **device**, from your smartwatch, your smart light bulb, to your mobile phone and laptop runs an operating system
  - Every **program** you will ever write will run on an operating system
  - Its **performance** and **execution** behavior will depend on the operating system

# Goal 2: Why is designing an OS hard?

# Diverse OSs needed

- Examples
  - **Linux/Unix**, MacOS, Windows, and many others
  - **Android**, iPhone iOS, Symbian, etc

# Across many devices

Have an operating system

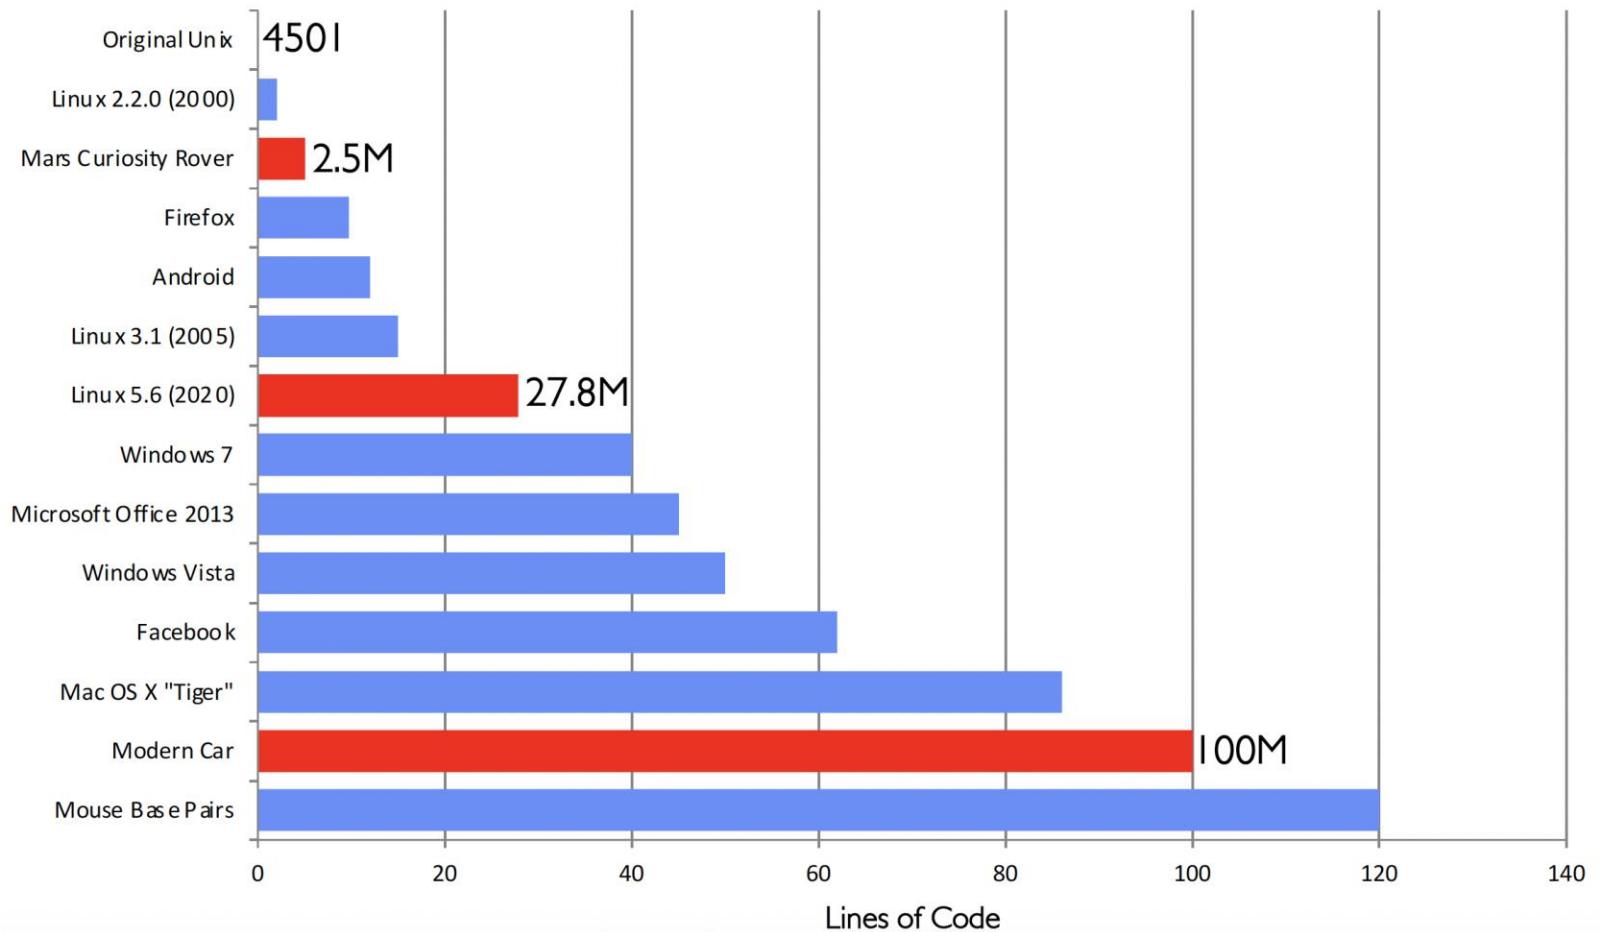

Communicate over the Internet

Interface across huge diversity of devices

# Across many timescales

L1 cache reference	0.5 ns
Branch mispredict	5 ns
L2 cache reference	7 ns
Mutex lock/unlock	25 ns
Main memory reference	100 ns
Compress 1K bytes with Zippy	3,000 ns
Send 2K bytes over 1 Gbps network	20,000 ns
Read 1 MB sequentially from memory	250,000 ns
Round trip within same datacenter	500,000 ns
Disk seek	10,000,000 ns
Read 1 MB sequentially from disk	20,000,000 ns
Send packet CA->Netherlands->CA	150,000,000 ns

# With increased complexity

# Why so much complexity?

Started with a simple architecture ([Von Neumann Architecture](#))...

John von Neumann  
(1903 – 1957)

# Why so much complexity?

- Hardware is becoming smarter!
- Better reliability and security
- Better performance (more efficient code, more parallel code)
- Better energy efficiency

# Goal 3: What is an Operating System?

# What's operating system?

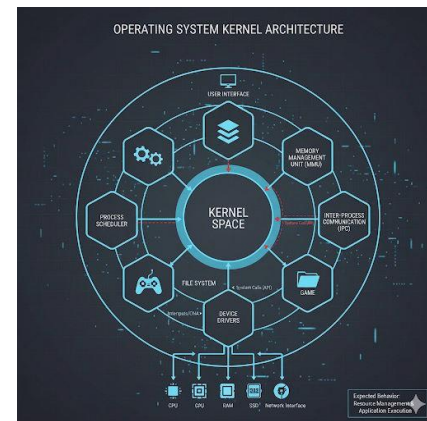

## Operating

**Manages multiple tasks and users**

## System

**A set of interconnected components with an expected behavior observed at the interface with its environment**

Generated by Gemini 2.5 Proc

# Operating System (v1)

An operating system is the layer of software that interfaces (many) applications running on a machine with (diverse) hardware resources of that machine

# Operating System (v2)

An operating system implements a virtual machine for the application whose interface is more convenient than the raw hardware interface (convenient = portability, reliability, security)

Still hard to understand  
what's OS?

# Roles of OS

## **Referee**

Manage protection, isolation, and sharing of resources

## **Illusionist**

Provide clean, easy-to-use abstractions of physical resources

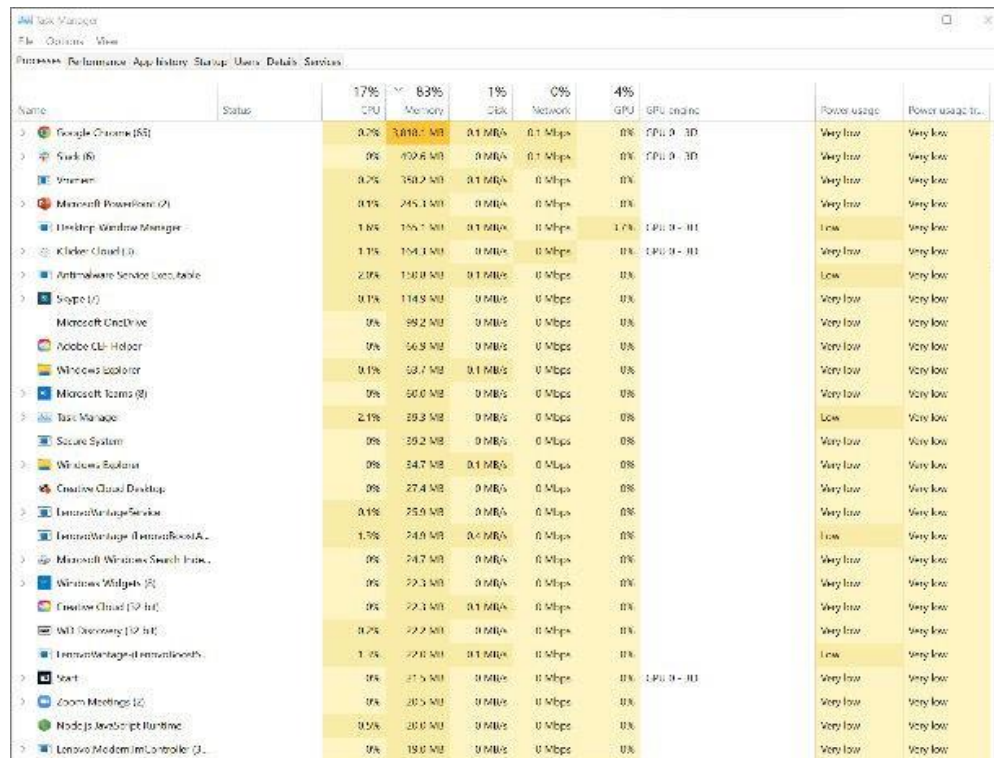

## **Glue**

Provides a set of common services

# OS as a referee

Allow multiple (untrusted) applications to run concurrently

The screenshot shows the Windows Task Manager Performance tab. At the top, it displays overall system usage: CPU 17%, Memory 83%, Disk 1%, Network 0%, and GPU 4%. Below this is a table listing various processes and their resource usage. The table has columns for Name, Status, CPU, Memory, Disk, Network, GPU, GPU index, Power usage, and Power usage limit. The processes listed include Google Chrome (65), Slack (8), VMware, Microsoft PowerPoint (2), Desktop Window Manager, Klipper Cloud (3), Antimalware Service Executable, Skype (2), Microsoft OneDrive, Adobe CLI Helper, Windows Explorer, Microsoft Teams (8), Task Manager, Secure System, Windows Explorer, Chrome Cloud Desktop, Internet Widgets Service, Internet Widgets (Internet Explorer), Microsoft Windows Search Index, Windows Widgets (2), Creative Cloud (2), Win10 Recovery (2), Internet Widgets (Internet Explorer), Start, Zoom Meetings (2), Node.js JavaScript Runtime, and Lenovo Modem/In-Controller (2).

Name	Status	CPU	Memory	Disk	Network	GPU	GPU index	Power usage	Power usage limit
Google Chrome (65)		0.2%	1,018.7 MB	0.1 MB/s	0.1 Mbps	0%	GPU 0 - 3D	Very low	Very low
Slack (8)		0%	432.6 MB	0 MB/s	0.1 Mbps	0%	GPU 0 - 3D	Very low	Very low
VMware		0.2%	148.2 MB	0.1 MB/s	0 Mbps	0%		Very low	Very low
Microsoft PowerPoint (2)		0.1%	245.1 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Desktop Window Manager		1.8%	155.7 MB	0.1 MB/s	0 Mbps	1.7%	GPU 0 - 3D	Low	Very low
Klipper Cloud (3)		1.1%	154.3 MB	0 MB/s	0 Mbps	0%	GPU 0 - 3D	Very low	Very low
Antimalware Service Executable		2.0%	130.8 MB	0.1 MB/s	0 Mbps	0%		Low	Very low
Skype (2)		0.1%	114.9 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Microsoft OneDrive		0%	99.2 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Adobe CLI Helper		0%	56.9 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Windows Explorer		0.1%	53.7 MB	0.1 MB/s	0 Mbps	0%		Very low	Very low
Microsoft Teams (8)		0%	50.0 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Task Manager		2.1%	39.3 MB	0 MB/s	0 Mbps	0%		Low	Very low
Secure System		0%	39.2 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Windows Explorer		0%	34.7 MB	0.1 MB/s	0 Mbps	0%		Very low	Very low
Chrome Cloud Desktop		0%	27.4 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Internet Widgets Service		0.1%	25.9 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Internet Widgets (Internet Explorer)		1.5%	24.9 MB	0.1 MB/s	0 Mbps	0%		Low	Very low
Microsoft Windows Search Index		0%	24.7 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Windows Widgets (2)		0%	22.3 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Creative Cloud (2)		0%	22.1 MB	0.1 MB/s	0 Mbps	0%		Very low	Very low
Win10 Recovery (2)		0.2%	22.2 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Internet Widgets (Internet Explorer)		1.2%	22.0 MB	0.1 MB/s	0 Mbps	0%		Low	Very low
Start		0%	21.5 MB	0 MB/s	0 Mbps	0%	GPU 0 - 3D	Very low	Very low
Zoom Meetings (2)		0%	20.5 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Node.js JavaScript Runtime		0.5%	20.0 MB	0 MB/s	0 Mbps	0%		Very low	Very low
Lenovo Modem/In-Controller (2)		0%	19.0 MB	0 MB/s	0 Mbps	0%		Very low	Very low

# OS as a referee

## Fault Isolation

Isolate programs from each other

Isolate OS from other programs

Process

Dual Mode Execution

## Resource Sharing

How to choose which task to run next?

How to split physical resources?

Scheduling

## Communication

How can OS support communication to share results?

Pipes/Sockets

# What does this program do?

---

```
#include <stdio.h>
#include <stdlib.h>
#include <sys/time.h>
#include <assert.h>

int main(int argc, char *argv[]){
    char *str = argv[1];
    while (1) {
        printf("%s\n", str);
    }
    return 0;
}
```

```
ion@laptop> gcc -o cpu cpu.c -Wall
```

```
ion@laptop> ./cpu A
```

```

# Three main roles

## **Referee**

Manage protection, isolation,  
and sharing of resources

## **Illusionist**

Provide clean, easy-to-use  
abstractions of physical  
resources

# OS as Illusionist

Mask the restrictions inherent in computer hardware through [virtualization](#)

## **All alone**

Provide illusion that  
application has exclusive  
use of resources

## **All powerful**

Provide illusion that  
hardware resources are  
infinite

## **All expressive**

Provide illusion of  
hardware capabilities that  
are not physically present

# What does this program do?

---

```
#include <stdio.h>
#include <stdlib.h>
#include <unistd.h>

int main(int argc, char *argv[]){
    int *p = malloc(sizeof(int));
    printf("(%d) p: %p\n", getpid(), p);
    *p = 0;
    while (1) {
        *p = *p + 1;
        printf("(%d) p: %d\n", getpid(), *p);
    }
    return 0;
}
```

```
ion@laptop> gcc -o memory memory.c -Wall
ion@laptop> ./memory
```

```
(120) p: 0x200000
(120) p: 1
(120) p: 2
(120) p: 3
(120) p: 4
```

```
ion@laptop> ./memory & ./memory
```

```
(120) p: 0x200000
(254) p: 0x200000
```

a)

```
(120) p: 1
(254) p: 2
(120) p: 3
(254) p: 4
(120) p: 5
(254) p: 6
```

...

b)

```
(120) p: 1
(254) p: 1
(120) p: 2
(254) p: 2
(120) p: 3
(254) p: 3
```

...

# Three main roles

## **Referee**

Manage protection, isolation,  
and sharing of resources

## **Illusionist**

Provide clean, easy-to-use  
abstractions of physical  
resources

## **Glue**

Provides a set of common  
services

# OS as Glue

---

Provide set of common, standard services to applications to simplify and regularize their design

## **Make sharing easier**

Simpler if all assume same basic primitives

## **Maximise reuse**

Avoid re-implementing functionality from scratch.  
Evolve components independently

File System, User Interface, Network, etc.

# Putting it all together

Referee + illusionist + Glue  
=> Easy to use virtual machine

# Three aspects for the Class

- Understanding OS principles
- System Programming
- Map Concepts to Real Code

# Topic Breakdown (Course Objective)

- virtualizing the CPU (**process**): process, thread, scheduling, synch
- virtualizing memory (**memory**): memory management, virtual memory
- **storage**: file systems, I/O systems

- **Distributed system**: communication, data processing, etc (not covered but falls into my research focus, happy to chat!)

# Goal 4: Policy/advice/challenges/oppo rtunities?

# Your participation

- Lectures
  - essential for doing well in assignments/exams
- Assignments (55% total)
  - 4 programming assignments (A1 is easy)
- Tutorials
  - extra details and hints on assignments
- Exams
  - 3 midterms (15% each on Oct 6, Nov 3, Dec 1, 2025)
- See the course website (<https://wenjun-y.github.io/csc360>) for detailed schedules

\* each exam focuses on one major module

# Suggested approach

- Before lectures
  - read textbook; preview video; find questions
- Attend lectures
  - take notes; **ask** questions; answer questions!
- After lectures
  - read textbook; explore further
  - write assignments (start early!)
  - get help and help others (discussion forum, etc)
- Do attend tutorials

# Common *mistakes/complaints*

- “Slides are already online”
  - Lectures are much more than just browsing slides
  - Pay attention to in-class questions/discussion too!
- “Slides are too brief”
  - Slides are just guidelines to navigate/understand
  - Take notes in class and read the textbook!
- “Start to do assignments on the due date”
  - Simple fact: you cannot finish, or even start, them
  - Start early and let us know if you have questions!

# More systems courses

- *Computer networks (CSc 361 ~ networkOS)*
  - suggestion: take it after CSC360
- *Advanced computer networks (CSc 466)*
- *Advanced communication networks (CSc 467)*
- *Wireless and mobile networks (CSc 463)*
- *Network management and security (topics/DS)*
- *Embedded systems (CSc 460)*
- *Multimedia systems (CSc 461)*
- *Distributed systems (CSc 462)*

# Your feedback

- Teaching/learning is interactive
  - two-way communications
- Let me know
  - what you think about lectures, assignments, tutorials, exams, topics, ...
  - what you want to know more or probe further
- You can *always* reach me
  - in class, during office hours, by Teams/email

# Course Reps

- Please volunteer yourself!
  - **Anonymize**
  - **Aggregate**
  - **Amplify**
- Feedback to the teaching team
  - lecture and lab/tutorial instructors, markers
  - meet once a month face-to-face or by Teams
  - communicate electronically when necessary

Let me know your willingness to volunteer. Thanks!

# Course policies

- See official course outline
  - late assignments, mark appeals, etc
  - academic integrity
    - zero tolerance on cheating!
  - accommodation, etc
- No group assignment/project
  - collaboration/participation is encouraged
  - responsibility: your submitted work is yours
  - obligation: give credits to references

# Need more challenge?

- ACM International Collegiate Programming Contest (ICPC)
  - UVic has been participating in the last few years
  - <https://oac.uvic.ca/programmingclub/>
- BCNET Broadband Innovation Challenge, or DMC
  - any applications running over broadband networks
  - previous winning projects (some from UVic)
    - <http://www.cs.uvic.ca/~pan/bcnet>
- Other student competitions and clubs
  - <https://www.uvic.ca/ecs/computerscience/undergraduate/student-clubs/index.php>

# Good News!!!

- *“LTI has issued a call for extra JCURA nominations with a short deadline. If you have any new JCURA applications (that were not already submitted for the initial call earlier this year), please submit them to Prof. Jianping Pan (<https://webhome.cs.uvic.ca/~pan/>) by the internal deadline of **Tuesday, September 9th.**”*

# One last note...

- Operating systems in the age of AI
- Everything gets reinvented
- This class more relevant than ever

# Lots of activity over past 15 years!

How do you share a cluster across different distributed workloads ?

How do you share a cluster across different users, jobs, and queries?

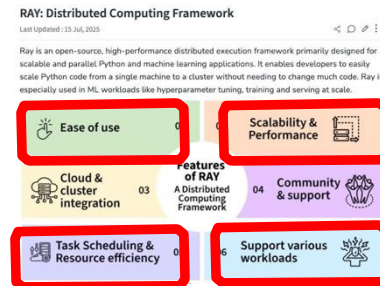

**RAY**

How do you simplify the implementation and execution of distributed AI apps?

How do you do high performance LLM inference for many models across many GPUs supporting different workloads?

**Mesosphere unveils Mesos-based datacenter OS plus \$36m injection**

- Memory management
- Scheduling, load balancing
- Performance isolation
- Hierarchical storage (GRAM, RAM, SSD)
- ...

# This lecture so far

- An introduction to the course
  - who, when, where, what, and why
  - course materials
  - course objectives
  - course topics
  - you and the course

# This lecture so far

- Summary of goals
  - Why should you care?
    - The OS is everywhere
  - Why is it hard?
    - Deal with many different devices, many different time scales.  
Safety-critical
  - What is an Operating System?
    - Provides abstraction of a simple, infinite virtual machine
    - Three roles: illusionist, referee and glue
    - A good OS cares about performance, reliability, security and portability

# Next lecture

- Interfaces to OS
  - CLI, GUI, system calls, API
  - read OSC7 Chapter 2 (or OSC6 Chapter 3)

**Don't miss the JCURA chance**
